## PROFILE

Computer Science graduate with hands-on experience in data cleaning, validation, and analysis across end-to-end analytics projects using Python, SQL, and Power BI. Experienced in transforming structured relational data in PostgreSQL and building interactive dashboards to generate business insights and support decision-making.

## EDUCATION

### Bachelor of Computer Science

Graduated 2026

Muhammadiyah University of Surakarta

- GPA : 3.51 / 4.00

## SKILLS

**Data Analysis** : Python (Pandas), SQL, PostgreSQL, Microsoft Excel

**Data Visualization** : Power BI, Matplotlib, Seaborn

**Tools** : Jupyter Notebook, Git, VS Code, Power Query

## PROJECTS

### Live-Commerce Sales & Refund Analytics | Excel, Power BI

July 2026

*Client-Based Analytics Project*

- Built an end-to-end analytics workflow for a live-commerce retail business, cleaning and transforming 300 orders (694 line-item rows) in Power Query and resolving data quality issues affecting product-level sales and refund analysis
- Analyzed sales, product performance, and refund patterns using DAX measures, identifying a 5.67% refund rate, revenue concentration in a top-selling product, and a ~3× revenue spike in January 2026
- Delivered an interactive Power BI dashboard and actionable recommendations to support ongoing sales monitoring, refund cost evaluation, and product-level decision-making for the business owner

### Brazilian E-Commerce Analytics | PostgreSQL, Power BI

June 2026

*Independent Project*

- Built end-to-end ETL pipeline in PostgreSQL across 9 relational tables (99K+ orders), including deduplication of 1M+ geolocation records, median imputation, and column standardization
- Analyzed revenue trends, RFM segmentation, and delivery performance using window functions (LAG, RANK, NTILE), surfacing São Paulo as top market (R\$5.9M) and 91.89% on-time delivery rate
- Delivered interactive Power BI dashboard with DAX measures covering regional performance, category rankings, and seller analytics

### Diabetes Risk Prediction Model | Python, Flask

November 2025 - February 2026

*Undergraduate Thesis*

- Built a machine learning model to predict early-stage diabetes risk using 48K+ health records (CDC dataset), handling class imbalance with SMOTE
- Selected Logistic Regression based on highest recall (75%) and ROC-AUC (83%), deployed via Flask web app for real-time prediction

## WORK EXPERIENCE

### System Analyst Intern

Mar 2025 - May 2025

*PT Tiga Serangkai Pustaka Mandiri | Surakarta*

- Analyzed and validated functional workflows across 3 MRP system modules by executing 21 structured scenarios, identifying 6 functional failures in export and print features, and reporting prioritized findings to the development team
- Developed and maintained technical documentation, including validated User Manuals with annotated screenshots and workflow diagrams, approved by the field supervisor and IT team
- Maintained accurate documentation and issue records across testing cycles to support issue tracking, monitoring, and evaluation by the development team.

## CERTIFICATIONS

### Google Data Analytics Professional Certificate

June 2026

*Coursera | Issued by Google*

### IBM Data Science Professional Certificate

June 2026

*Coursera | Issued by IBM*
