

MUHAMMAD GHIFARI ZAKI KHATAMI

DATA ANALYST

ghifarizaki.ws@gmail.com | +6285746707681 | [linkedin.com/in/ghifarizaki](https://www.linkedin.com/in/ghifarizaki)

<https://gzxos.github.io/portofolio/> | Surakarta, Indonesia

PROFILE

Computer Science graduate with hands-on experience in end-to-end data analytics projects using Python, SQL, and Power BI. Experienced in data cleaning, ETL pipeline development, and building interactive dashboards that translate large datasets into actionable business insights.

EDUCATION

Bachelor of Computer Science

Graduated 2026

Muhammadiyah University of Surakarta

- GPA : 3.51 / 4.00

SKILLS

Data Analysis : Python (Pandas), SQL, PostgreSQL, Microsoft Excel

Data Visualization : Power BI, Matplotlib, Seaborn

Tools : Jupyter Notebook, Git, VS Code, Power Query

PROJECTS

Brazilian E-Commerce Analytics | PostgreSQL, Power BI

June 2026

- Built end-to-end ETL pipeline in PostgreSQL across 9 relational tables (99K+ orders), including deduplication of 1M+ geolocation records, median imputation, and column standardization
- Analyzed revenue trends, RFM segmentation, and delivery performance using window functions (LAG, RANK, NTILE), surfacing São Paulo as top market (R\$5.9M) and 91.89% on-time delivery rate
- Delivered interactive Power BI dashboard with DAX measures covering regional performance, category rankings, and seller analytics

Amazon India Sales Dashboard | Excel, Power BI

May 2026

- Cleaned 128K+ records in Excel and Power Query standardized 13 order statuses into 5 groups and resolved state abbreviations for accurate regional mapping
- Identified 14.21% cancellation rate and April - June revenue decline, with Maharashtra leading at ₹122M and Set category at ₹357M (2x second-best)
- Built Power BI dashboard tracking ₹1.03B revenue across regions, categories, and order status distributions

Diabetes Risk Prediction Model | Python, Flask

November 2025 - February 2026

- Built a machine learning model to predict early-stage diabetes risk using 48K+ health records (CDC dataset)
- Handled class imbalance using SMOTE and selected Logistic Regression over Random Forest and XGBoost based on highest recall (75%) and ROC-AUC (83%), optimizing for health screening sensitivity
- Performed feature selection and identified key risk factors (BMI, Age, General Health)
- Deployed model into a Flask-based web app for real-time prediction

WORK EXPERIENCE

Quality Assurance Intern

Mar 2025 - May 2025

PT Tiga Serangkai Pustaka Mandiri | Surakarta

- Conducted Black Box testing across 3 MRP system modules, executing 21 structured test scenarios, identifying 6 functional failures in export and print features, and delivering a prioritized bug report to the development team.
- Produced validated technical documentation including User Manuals with annotated screenshots and workflow diagrams, approved by field supervisor and IT team

CERTIFICATIONS

Google Data Analytics Professional Certificate

June 2026

Coursera | Issued by Google
